# 180 Super Tunnel

The 180 Super Tunnel shares the innovative design of Blue Wave's Tunnel series. The Super Tunnel's rounded tunnel design allows you to motor up and plane in shallower water than a square tunnel or full V hull design. With its port aerated livewell and two 72 qt. ice chests, the 180 Super Tunnel provides plenty of storage for fish and food. You will enjoy the ability to track your prey anywhere in the shallows or open bay in comfort.
